Fresh funds, efforts to boost maritime sector

Tharman says a core of local talent should be grown to meet challenges

By LYNN KAN
[SINGAPORE] Singapore’s maritime sector will be getting fresh funds and programmes that will build up a local talent pool, improve productivity levels and spur more research and development activity.

Deputy Prime Minister Tharman Shanmugaratnam said the government will set aside $25 million to support productivity initiatives among maritime companies.

Singapore has 5,000 maritime companies that employ 170,000 people. The sector contributes 7 per cent to Singapore’s GDP.

The Maritime Cluster Fund-Productivity Programme will co-fund business initiatives, such as business process re-engineering, automation and adoption of other productivity tools or practices.

“Productivity improvements are indeed critical not only for Singapore’s maritime sector but also across the global maritime industry, given the universal challenges of cost pressures and shortage of skilled manpower,” said Mr Tharman in his opening remarks at the Sea Asia Conference and Exhibition yesterday.

Singapore’s harbour craft sector was singled out as a potential beneficiary of the MCF-Productivity Programme. Operators that manually assign their vessels to work could use IT systems to do the job in real time.

In coming months, the Maritime and Port Authority of Singapore will be working with harbour craft operators to review the sector’s highly fragmented market structure and identify opportunities for productivity improvements.

“These may include re-defining business models, developing new harbour craft designs, re-designing jobs and upskilling harbour craft workers,” Mr Tharman said.

The government will also continue a maritime research and development kitty for another five years with a $50 million injection.

The Maritime Innovation and Technology (MINT) fund, started in 2003 with $100 million, has doled out $93 million to date to develop automated guided vehicles for Singapore’s port and ballast water treatment systems for ships.

Mr Tharman emphasised the need to grow skills and quality manpower to ensure Singapore remained an attractive international maritime centre.

“We must grow a core of local maritime talent who will drive the next chapter of Maritime Singapore,” he said.

A $2 million Global Internship Award will nudge undergraduates to the sector. MPA expects to grant 100 interns over five years full sponsorship on their maritime-focused local and overseas attachments.

About 15 companies have signed up for the programme.

Furthermore, Singapore’s institutes of higher learning are also turning their attention to maritime education.

Singapore’s newest university, the Singapore University of Technology and Design, will establish a MPA-American Bureau of Shipping professorship to build up the institution’s capabilities in maritime education and R&D, said Mr Tharman.

Singapore Management University will offer a Maritime Economics Concentration (MEC) in August, where economics majors will learn about maritime economics, maritime law, supply-chain management and ship finance.

About 40 undergraduates will get to go on overseas industry study missions, attend talks by industry practitioners and undertake internships as part of the MEC.

Companies, such as DNB Bank, Womar Logistics and Pacific International Lines have signalled their intent to be industry partners of the MEC.

“There is a great need for students with specialised background knowledge of Singapore’s shipping and maritime companies,” said CEO of Womar Logistics, Hans Van der Zijde.
